

Zarius J. Dubash

Alpha Kappa Psi Professional Application

2/11/18

Questions:

1. What are your short term and long term professional goals? (75 words max)

As a business student, I often get some strange looks when I tell people I don't care about money. Instead, I want to make real, tangible change in the lives of those who need it most. With my technological passion, the Internet of Things, I want to work towards instrumenting the physical world to improve quality of life, both short-term and long-term, first through internships and small endeavors, and eventually my own ventures and non-profits.

2. Based on what you know so far, how do you think Alpha Kappa Psi can help you in your professional endeavors? (75 words max)

In my eyes, Alpha Kappa Psi are a group of responsible, driven, and knowledgeable brothers. From what I understand so far, and I know I have barely scratched the surface, being a part of this fraternity and family can help me develop as a leader, businessperson, and individual. I believe that every brother has unique skills, connections and experiences that can help me in my professional and personal endeavors.

3. If you were a brother of Alpha Kappa Psi, how would you contribute professionally to the brotherhood? (150 words max)

If I were a brother of Alpha Kappa Psi, I know that my contribution to the brotherhood would reflect a lot about myself. I was raised in the ancient Persian religion of Zoroastrianism, which has three core tenets: Good thoughts, good words, and good deeds. This is one of the factors that drives me to be the best person I can every day, and one way I try to do good is through community service. Since coming to Babson, I've been less active in this regard, but as part of Alpha Kappa Psi I would be honored to work with and potentially help to lead community service and outreach.

Additionally, I am rather knowledgeable about technology, and could assist brothers with nearly anything to do with this field. Being from the area, I also have a number of connections within the Boston tech industry, which could certainly be of use.
